

# CLIMATE TRANSPARENCY REPORT

## 2019

Kgori Capital (Pty) Ltd

# About the Climate-related Disclosure Indicators

Climate has been identified as a top priority for PRI signatories, with over 70% of asset owners reporting this as the most important long-term trend they are acting on.

The FSB Task Force's guidance on climate-related financial disclosure aim to create a single framework for disclosure on assessment and management of climate-related risk. The recommendations, supported by investors representing US\$22 trillion, identify four main disclosures, Governance, Strategy, Risk Management, Metrics and Targets, and include specific guidance for asset owners and managers.

As a result, the PRI introduced climate-related disclosure indicators that can be used to align with the TCFD recommendations in the 2019 PRI Reporting Framework.

## About this report

This report is an export of only the climate-related indicators from the 2019 Reporting Framework response. The full Public Transparency Report is available here ([https://reporting.unpri.org/surveys/PRI-reporting-framework-2019/-89A198DC-284E-47D2-A115-A37293955794/00000000-0000-0000-0000-000000000000/doc/2/-%7C%7C\\*complete\\*%7C\\*public\\*/Merged/](https://reporting.unpri.org/surveys/PRI-reporting-framework-2019/-89A198DC-284E-47D2-A115-A37293955794/00000000-0000-0000-0000-000000000000/doc/2/-%7C%7C*complete*%7C*public*/Merged/)). It shows the responses to all the completed climate indicators, even those you chose to keep private. It is designed for your internal review or – if you wish - to share with your stakeholders.

The PRI will not publish this report on its website if you have designated your 2019 climate reporting as “private”. Otherwise, you will be able to access the Climate Transparency Report of your organisation and that of other signatories on the [PRI website](#) and on the [Data Portal](#).

To easily locate information, there is a **Recommendation index** which summarises the indicators that signatories complete and disclose. The report presents information exactly as it was reported as per signatory preference. Where an indicator offers a response option that is multiple-choice, all options that were available to the signatory are presented in this report.

**SG 01.4**

Describe your organisation's investment principles and overall investment strategy, interpretation of fiduciary (or equivalent) duties, and how they consider ESG factors and real economy impact.

Quality investing is at the foundation of our investment strategy. The process is based on a set of four clearly defined fundamental criteria with the objective of identifying companies with the best quality characteristics. These characteristics of a company are broken down into four categories:

1. Market Positioning: an industry leader with a competitive advantage over its peers in a sector with attractive growth prospects.
2. Management Assessment: stable senior management, low turnover rates and interests aligned with shareholders.
3. Financial Strength: low variability in earnings, margins, and revenues coupled with a strong balance sheet with acceptable solvency and liquidity ratios, and strong cash flow generation characteristics.
4. Environment, Social, and Corporate Governance (ESG): a positive track record for sustainable and ethical business practices coupled with delivering on core principles of corporate governance practices of fairness, transparency, accountability, and responsibility in order to protect shareholder rights. Our investment analysts are required to assess ESG issues as part of the fundamental bottom up research and investment decision making process. ESG factors are taken into consideration when we assess the long term sustainability of an asset and are therefore embedded in our valuations.

**SG 14.8 CC**

Indicate whether climate-related risks are integrated into overall risk management and explain the risks management processes for identifying, assessing, and managing climate-related risks.

- Process for climate-related risks is integrated into overall risk management

Please describe

We recognise that properly structuring investment processes is the best form of risk control, making risk control a pro-active activity rather than merely a monitoring one. Therefore, risk management including the evaluation of climate related factors is embedded throughout our investment process which we view as particularly necessary when investing in Botswana. The market has limited investable securities, and is illiquid due to market size, low levels of investor participation and the high number of strategic shareholders.

The risk management process is integrated into the investment process and forms part of our security selection and portfolio construction process. The Portfolio Manager continuously monitors portfolio risks and is responsible for making portfolio changes that may be required from time to time. Risk metrics are monitored on a weekly basis and, prior to making any significant changes to the portfolio; the impacts on risk exposure are assessed.

- Process for climate-related risks is not integrated into our overall risk management

**SG 14.9 CC**

Indicate whether the organisation undertakes active ownership activities to encourage TCFD adoption.

- Yes

Please describe

Kgori Capital views seriously its responsibility to exercise voting authority over securities which form part of our clients' portfolios.

Proxy statements contain material issues involving shareholder rights and corporate governance issues,

among others, which deserve careful review and consideration.

We believe the public has a right to know whether a company uses substances that pose an environmental health or safety risk to a community in which it operates. Kgori Capital supports resolutions that ask for the adoption of a policy that makes information available to enable the public to assess a company's potential impact.

Kgori Capital also supports resolutions asking companies to prepare general reports describing environmental management plans.
