About the Climate-related Disclosure Indicators

Climate has been identified as a top priority for PRI signatories, with over 70% of asset owners reporting this as the most important long-term trend they are acting on.

The FSB Task Force's guidance on climate-related financial disclosure aim to create a single framework for disclosure on assessment and management of climate-related risk. The recommendations, supported by investors representing US$22 trillion, identify four main disclosures, Governance, Strategy, Risk Management, Metrics and Targets, and include specific guidance for asset owners and managers.

As a result, the PRI introduced climate-related disclosure indicators that can be used to align with the TCFD recommendations in the 2019 PRI Reporting Framework.

About this report

This report is an export of only the climate-related indicators from the 2019 Reporting Framework response. The full Public Transparency Report is available here (https://reporting.unpri.org/surveys/PRI-reporting-framework-2019/-5732F9A5-958E-4184-9A87-C219FBE2D77E/00000000-0000-0000-0000-000000000000/doc/2/-%7C%7C*complete*%7C*public*%7C*Merged/). It shows the responses to all the completed climate indicators, even those you chose to keep private. It is designed for your internal review or – if you wish - to share with your stakeholders.

The PRI will not publish this report on its website if you have designated your 2019 climate reporting as “private”. Otherwise, you will be able to access the Climate Transparency Report of your organisation and that of other signatories on the PRI website and on the Data Portal.

To easily locate information, there is a Recommendation index which summarises the indicators that signatories complete and disclose. The report presents information exactly as it was reported as per signatory preference. Where an indicator offers a response option that is multiple-choice, all options that were available to the signatory are presented in this report.
## TCFD Recommendations Index

SG 01.3  Indicate if the investment policy covers any of the following

☒ Your organisation’s definition of ESG and/or responsible investment and it’s relation to investments
☑ Your investment objectives that take ESG factors/real economy influence into account
☒ Time horizon of your investment
☒ Governance structure of organisational ESG responsibilities
☒ ESG incorporation approaches
☒ Active ownership approaches
☐ Reporting
☒ Climate change
☒ Understanding and incorporating client / beneficiary sustainability preferences
☐ Other RI considerations, specify (1)
☐ Other RI considerations, specify (2)

SG 01.4  Describe your organisation’s investment principles and overall investment strategy, interpretation of fiduciary (or equivalent) duties, and how they consider ESG factors and real economy impact.

As asset managers, we must invest on behalf of others with a clear sense of fiduciary duty. We consider that Responsible Investment is part of this fiduciary duty. As stewards of capital, we look to preserve the long-term interests of our clients by investing in companies where we believe the financial returns are sustainable over the long term. This includes monitoring the social and environmental impact of our investee companies to evaluate whether they support conditions for sustainable growth. This is important for the health of the financial returns, but also because our clients are affected by our investee companies in other ways - as consumers, employees, citizens and inhabitants of the earth.

SG 01.5  Provide a brief description of the key elements, any variations or exceptions to your investment policy that covers your responsible investment approach. [Optional]

Responsible Investment can be differentiated from traditional approaches to investment in four ways:

1) We believe that time horizons are critical; the ultimate objective is the creation of sustainable, long-term investment returns not just short-term returns. The long term has been the cornerstone of our investment philosophy since the beginning.

2) Responsible Investment requires that we monitor changes happening at the level of social ecosystems so as to link extra-financial analysis to financial outcomes and investment decisions. We believe in the ability of companies to transform social problems into economic opportunities. The long-term success of a company depends on the health of economic and environmental systems as well as evolving societal values and expectations.

3) Being an active investor is not only about selecting a few companies as measured by an active share, it also means facilitating positive impacts for civil society and the environment through our support to companies whose activities lead to positive outcomes (e.g. job creation, energy efficiency), including when the ESG profile of a company is in recovery.

4) We recognise that being a shareholder of a company implies that we share with it what we think is a good way of conducting its business and what is not. To become a responsible investor in a company is to accept this association, sharing in its good fortunes but also indirectly bearing some of its responsibilities and reputational risks.

To be responsible, an investor needs to think like an owner. Just like an owner, he or she needs to care about the strategic intent of the company as well as the impact of the company on its customers and employees. A responsible investor should try to answer some basic questions: What solutions does this company want to provide to what type of problems? What are the costs (direct and indirect) that will result from such actions? How should the benefits and costs be aggregated to assess the net social utility of the company? Do I want to invest in this business and with these people? And finally how should the value created be monetised and made as sustainable as possible?

We do not have any variations or exceptions to our RI Policy.
We have a long-term investment focus (at least 5 years). We evaluate both the transition risks (carbon footprint, environmental footprint) and the physical risks (heat stress, water stress, extreme precipitation, cyclones, hurricanes, typhoons, sea level rise, socio-economic vulnerability, supply chain risk, market risk) of our portfolios. In addition, we monitor the positive environmental impacts of the products offered by our portfolio holdings.

With regards to physical risks, we rely on a model developed by 427mt which uses historical and future climate conditions:

- **Timeframe:** data compares changes in temperature and precipitation-based indices between historical conditions (1975-2005) and future conditions (2020-2040). This enables us to identify the areas that will experience the greatest amount of change, a critical indicator of risk. For exposure to cyclones, because climate models cannot predict specific events, we analyzed historical data on wind speed and barometric pressure for 1200 cyclones from 1984-2017. This tells us which area have been most exposed to cyclones historically, and therefore will be most exposed to an increase in frequency and intensity of cyclones in the future. Water risk uses a mix of climate data (for drought projections) as well as existing water scarcity and projections in changes in water demand in the area.

- **Scenario:** Climate models only show meaningful differences between RCP (Representative Concentration Pathway) scenarios after 2050 - in other words, we are 'locked in' a certain amount of climate change for the next 20-30 years. In consequence, for our standard screening, we use the RCP 8.5 (business-as-usual) scenario.

*Yes*
Yes, the identification and management of material climate-related risks and opportunities are part of our ESG integration process which is described in our RI Policy.

No

**SG 1.12**

☐ Oversight/accountability for climate-related issues
☐ Assessment and management of climate-related issues
☐ No responsibility for climate-related issues

SG 07.6 CC
For board level roles for which have climate-related issues oversight/accountability or implementation responsibilities, indicate how these responsibilities are executed.

Climate-related issues are discussed in board meetings. The decision of carbon offsetting was taken. The article 173 reports were presented.

SG 07.7 CC
For the management-level roles that assess and manage climate-related issues, provide further information on the structure and process involved.

Climate-related issues are discussed in executive committee meetings. The decision of carbon offsetting was taken. The article 173 reports were presented and reviewed.

ESG issues in asset allocation

SG 13 | Mandatory | Public | Descriptive | PRI 1
---|---|---|---|---
SG 13.1 | Indicate whether the organisation undertakes scenario analysis and/or modelling and provide a description of the scenario analysis (by asset class, sector, strategic asset allocation, etc.). | ☑ Yes, to assess future ESG factors

Describe
All factors which may affect a company (P&L, cost of capital, liabilities, regulations, etc)

☐ Yes, to assess future climate-related risks and opportunities
☐ No, not to assess future ESG/climate-related issues

SG 13.2 | Indicate if your organisation considers ESG issues in strategic asset allocation and/or allocation of assets between sectors or geographic markets. | We do the following

☐ Allocation between asset classes
☐ Determining fixed income duration
☐ Allocation of assets between geographic markets
☐ Sector weightings
☐ Other, specify

Used emissions/environmental (GHG, water, etc) data, wages data, diversity data to inform investment decision making

☐ We do not consider ESG issues in strategic asset allocation
### SG 14.1

**Some investment risks and opportunities arise as a result of long term trends. Indicate which of the following are considered.**

- [ ] Changing demographics
- [ ] Climate change
- [ ] Resource scarcity
- [ ] Technological developments
- [ ] Other, specify(1)
- [ ] Other, specify(2)
- [ ] None of the above

### SG 14.2

**Indicate which of the following activities you have undertaken to respond to climate change risk and opportunity**

- [ ] Established a climate change sensitive or climate change integrated asset allocation strategy
- [ ] Targeted low carbon or climate resilient investments
- [ ] Phase out your investments in your fossil fuel holdings
- [ ] Reduced portfolio exposure to emissions intensive or fossil fuel holdings
- [ ] Used emissions data or analysis to inform investment decision making
- [ ] Sought climate change integration by companies
- [ ] Sought climate supportive policy from governments
- [ ] Other, specify
- [ ] None of the above

### SG 14.3

**Indicate which of the following tools the organisation uses to manage climate-related risks and opportunities.**

- [ ] Scenario analysis
- [x] Disclosures on emissions risks to clients/trustees/management/beneficiaries
- [ ] Climate-related targets
- [ ] Encouraging internal and/or external portfolio managers to monitor emissions risks
- [ ] Emissions-risk monitoring and reporting are formalised into contracts when appointing managers
- [ ] Weighted average carbon intensity
- [ ] Carbon footprint (scope 1 and 2)
- [ ] Portfolio carbon footprint
- [ ] Total carbon emissions
- [ ] Carbon intensity
- [ ] Exposure to carbon-related assets
- [ ] Other emissions metrics
- [ ] Other, specify
- [ ] None of the above
SG 14.4 If you selected disclosure on emissions risks, list any specific climate related disclosure tools or frameworks that you used.

- Carbon footprints of portfolios
- Stranded assets analysis
- Fossil fuel exposure analysis

SG 14.5 Additional information [Optional]

Technology developments: energy efficiency, telecommunications, clean tech

SG 14 CC Voluntary Public General

SG 14.6 CC Please provide further details on these key metric(s) used to assess climate related risks and opportunities.
