

CLIMATE TRANSPARENCY REPORT 2020

MACIF

About the Climate-related Disclosure Indicators

Climate has been identified as a top priority for PRI signatories, with over 70% of asset owners reporting this as the most important long-term trend they are acting on.

The FSB Task Force's guidance on climate-related financial disclosure aim to create a single framework for disclosure on assessment and management of climate-related risk. The recommendations, supported by investors representing US\$22 trillion, identify four main disclosures, Governance, Strategy, Risk Management, Metrics and Targets, and include specific guidance for asset owners and managers.

As a result, the PRI introduced climate-related disclosure indicators that can be used to align with the TCFD recommendations in the 2020 PRI Reporting Framework.

About this report

This report is an export of only the climate-related indicators from the 2020 Reporting Framework response. The full Public Transparency Report is available here (<https://reporting.unpri.org/surveys/PRI-reporting-framework-2020/-7C637174-6092-4EB9-9D53-A7EAA06053B1/79894dbc337a40828d895f9402aa63de/html/2/?lang=en&a=1>). It shows the responses to all the completed climate indicators, even those you chose to keep private. It is designed for your internal review or – if you wish - to share with your stakeholders.

The PRI will not publish this report on its website if you have designated your 2020 climate reporting as “private”. Otherwise, you will be able to access the Climate Transparency Report of your organisation and that of other signatories on the [PRI website](#) and on the [Data Portal](#).

To easily locate information, there is a **Recommendation index** which summarises the indicators that signatories complete and disclose. The report presents information exactly as it was reported as per signatory preference. Where an indicator offers a response option that is multiple-choice, all options that were available to the signatory are presented in this report.

Investment policy

SG 01	Mandatory	Public	Core Assessed	General
-------	-----------	--------	---------------	---------

New selection options have been added to this indicator. Please review your prefilled responses carefully.

SG 01.1	Indicate if you have an investment policy that covers your responsible investment approach.
---------	---

SG 01 CC	Mandatory to Report Voluntary to Disclose	Public	Descriptive	General
----------	---	--------	-------------	---------

SG 01.6 CC	Indicate whether your organisation has identified transition and physical climate-related risks and opportunities and factored this into the investment strategies and products, within the organisation's investment time horizon.
------------	---

Yes

	Describe the identified transition and physical climate-related risks and opportunities and how they have been factored into the investment strategies/products.
--	--

Climate risks may affect our portfolios. In the short term, we consider the potential impact of European Union targets on those that derive a substantial amount of their revenues from coal mining and coal-fire power generation. The asset of these companies could rapidly become "stranded". In the midterm, companies that do not meet the CO2 emissions targets (whether direct or indirect) are likely to incur additional costs (taxes, litigation...).

For our fixed income portfolio, considering the probability of some assets becoming rapidly stranded, we have made the decision to eliminate from our investment universe all companies stated on the Coal Plant Developers list originated by the NGO Urgewald and coal mines owners.

Our asset manager, for its mutual funds directly managed, has made the same decision.

Our investment time horizon depends on our liabilities between 10 and 15 years.

Reputation risk : rather a short term risk. Pressure is mounting on investors and asset managers over the financing of highly CO2 emitting corporations and industries namely utilities. The potential damage to our brand name could be significant and tarnish our customers. Engaging dialogue with NGO's on climate change issues has been part of our strategy. The upshot of this dialogue was a major decision affecting our investment policy. The action undertaken has indeed reduced the risk to our reputation.

Regulation risk : at the present time, the European Union is considering raising the standards in ESG and Climate-related legislation for institutional and individuals.

Market authorities are increasingly focusing their attention towards these topics.

Market opportunities : institutional investors are driven by present French and coming European Union regulation on climate disclosure. The coming European Union regulation changes on taxonomy and Disclosure are set to drive individual investors towards more sustainable financial products. In the short and medium term we aim to offer more SRI unit-linked products to our life insurance customers.

Investment opportunities : corporations investing in low-carbon technologies are likely to outperform over medium and long term time scale.

Physical risks related to positions in our fixed incomes portfolio have been identified and monetized.

7 risks are considered: Extreme Cold, Extreme Heat, Precipitation, Extreme Snowfall, Extreme Wind, Coastal Flooding, Tropical Cyclones.

No

SG 01.7
CC

Indicate whether the organisation has assessed the likelihood and impact of these climate risks?

Yes

Describe the associated timescales linked to these risks and opportunities.

An Carbon Delta analysis estimates the financial risk over 30-year horizon.

No

SG 01.8
CC

Indicate whether the organisation publicly supports the TCFD?

Yes

No

SG 01.9
CC

Indicate whether there is an organisation-wide strategy in place to identify and manage material climate-related risks and opportunities.

Yes

Describe

For our portfolio delegated to OFI AM :

The approval of the OFI AM board is required on the document that highlights the climate-risk and opportunities in the Macif group portfolios directly managed by OFI. All elements included in this report, assessing the underlying issuers at risk and opportunities in the portfolios are complemented by the use of scenario analysis on a 5 year and 15 years' time scale.

On the short term, reputation and transition risks have been identified and have led to major investment strategy adjustments.

The OFI AM executive committee has approved a training program on Climate-related issues. In 2019, all the portfolio managers received a specific training on TCFD. OFI is deploying it more widely in the company.

In the face of transition risks, measuring the carbon footprint of investments has been a first approach adopted by Macif group.

The reduction of carbon emissions is not enough to address the climate issue and can eventually lead to an investment policy that would lower its emissions without contributing to a low carbon transition. Therefore, In addition, we use a combination of several approaches. Three complementary approaches are proposed that cover specific time horizons.

The first, developed by OFI AM, uses current data and integrates a prospective dimension based on the climate strategy of the actors belonging to the most emitting sectors. It allows establishing a risk score of the portfolio, constituting a decision-making tool. The analysis focuses on issuers in the most intense sectors in terms of carbon emissions (Automotive, Chemicals, Building Materials, Oil and Gas, Utilities, etc.) and results are a matrix of risks and opportunities as well as a split between green and brown shares of activities in the portfolios.

The second (2°C investing initiative) projects at 5 years the technological positioning of companies in sectors for which alternative low carbon technologies exist. This approach allows us to visualize the alignment of the portfolios with the 2 ° scenario of the IEA. A prospective scenario analysis is carried out for sectors with high greenhouse gas emissions (energy, electricity, transport and industrial). The model assesses the alignment of investment portfolios over a 5-year forecast period. The time horizon is that of capital expenditure planning for which data can be tracked at a significant level.

The third delivers an estimate of financial risk and opportunities over a 15-year horizon. It quantifies the potential financial impacts on the portfolio by incorporating an estimate of physical and transition risk. The Carbon Delta analysis methodology completes and deepens the OFI methodology, in line with the recommendations of the TCFD. The methodology thus brings the following elements :

- Monetization of climate change risk and opportunities ;

- Resilience of portfolios to different climate scenarios, including a 2 ° C scenario ;
- The determination of a temperature of a portfolio ;
- The assessment of physical risks.

The financial impact of transition and physical risks has been calculated for the first year regarding all Macif group investments.

No

**SG 1.10
CC**

Indicate the documents and/or communications the organisation uses to publish TCFD disclosures.

- Public PRI Climate Transparency Report
- Annual financial filings
- Regular client reporting
- Member communications
- Other

specify

OFI AM, our asset manager, will publish a dedicated TCFD report by the end of april 2020.

- We currently do not publish TCFD disclosures

Governance and human resources

SG 07 CC

Mandatory to Report Voluntary to Disclose

Public

Descriptive

General

**SG 07.5
CC**

Indicate the roles in the organisation that have oversight, accountability and/or management responsibilities for climate-related issues.

Board members or trustees

- Oversight/accountability for climate-related issues
- Assessment and management of climate-related issues
- No responsibility for climate-related issues

Chief Executive Officer (CEO), Chief Investment Officer (CIO), Chief Risk Officer (CRO), Investment Committee

- Oversight/accountability for climate-related issues
- Assessment and management of climate-related issues
- No responsibility for climate-related issues

Other Chief-level staff or heads of departments

- Oversight/accountability for climate-related issues
- Assessment and management of climate-related issues
- No responsibility for climate-related issues

External managers or service providers

- Oversight/accountability for climate-related issues
- Assessment and management of climate-related issues
- No responsibility for climate-related issues

SG 07.6 CC

For board-level roles that have climate-related issue oversight/accountability or implementation responsibilities, indicate how these responsibilities are executed.

We have included in our investment policy the climate related exclusions on the same level as financial risk limit. This policy is approved by the board members of the head quarter.

Our asset manager, OFI AM, aims to bring the climate issue to the highest level of its company and integrate it into its corporate strategy. OFI AM's climate policy oversight body is the board of directors.

Its role is to control the relevance of OFI AM's climate change policy and that the executive committee ensure the implementation of it.

This mission is carried out in collaboration with the OFI group Executive Committee. In order to facilitate communication between the two bodies a referent is appointed. The referent on the Board of Directors is the OFI AM's General Manager. His mission is to make sure that the climate issue is well addressed within the board of directors. To carry out this mission, he can put on the agenda any item related to the climate issue and convene any person that he will find useful.

The OFI AM Board of Directors will address climate related issues at least once a year. Nevertheless, the referent can put on the agenda any purpose relating to climate change at any time.

This specific governance will be presented to the OFI AM board of directors for validation in June 2020. In order to review and track progress, a dashboard is set up and consists of the following indicators :

- "physical" indicators (carbon footprint, "temperature" of investments, technological trajectory, green / brown share ...);
- "financial" indicators (climatic financial impact, transition risk financial impact, opportunities financial impact, VAR of physical risk ...);
- indicators relative to products and services dedicated to climate issues (subscription / redemption of funds, turnover from funds and services related to the climate ...).

Any indicator (quantitative and / or qualitative) to ensure the proper implementation of the OFI AM group's climate policy.

SG 07.7 CC

For management-level roles that assess and manage climate-related issues, provide further information on the structure and processes involved.

Our asset manager, OFI AM, aims to bring the climate issue to the highest level of its company and integrate it into its corporate strategy. OFI AM's climate policy oversight body is the board of directors.

Its role is to control the relevance of OFI AM's climate change policy and that the executive committee ensure the implementation of it.

This mission is carried out in collaboration with the OFI group Executive Committee. In order to facilitate communication between the two bodies a referent is appointed. The referent on the Board of Directors is the OFI AM's General Manager. His mission is to make sure that the climate issue is well addressed within the board of directors. To carry out this mission, he can put on the agenda any item related to the climate issue and convene any person that he will find useful.

The OFI AM Board of Directors will address climate related issues at least once a year. Nevertheless, the referent can put on the agenda any purpose relating to climate change at any time.

This specific governance will be presented to the OFI AM board of directors for validation in June 2020. In order to review and track progress, a dashboard is set up and consists of the following indicators :

ESG issues in asset allocation

SG 13	Mandatory	Public	Descriptive	PRI 1
--------------	------------------	---------------	--------------------	--------------

SG 13.1	Indicate whether the organisation carries out scenario analysis and/or modelling, and if it does, provide a description of the scenario analysis (by asset class, sector, strategic asset allocation, etc.).
----------------	--

- Yes, in order to assess future ESG factors
- Yes, in order to assess future climate-related risks and opportunities

	Describe
--	----------

via the OFI AM work for Macif group.

- No, our organisation does not currently carry out scenario analysis and/or modelling

SG 13.2	Indicate if your organisation considers ESG issues in strategic asset allocation and/or allocation of assets between sectors or geographic markets.
----------------	---

	We do the following
--	---------------------

- Allocation between asset classes
- Determining fixed income duration
- Allocation of assets between geographic markets
- Sector weightings
- Other, specify
- We do not consider ESG issues in strategic asset allocation

SG 13 CC	Mandatory to Report Voluntary to Disclose	Public	Descriptive	General
-----------------	--	---------------	--------------------	----------------

**SG 13.4
CC**

Describe how your organisation is using scenario analysis to manage climate-related risks and opportunities, including how the analysis has been interpreted, its results, and any future plans.

- Initial assessment
- Incorporation into investment analysis

Describe

The OFI AM scenario analysis provides a forward-looking perspective and therefore helps us spot corporations most at risk on a mid-term scale. Integration of the results into the OFI AM investment policy and OFI AM risk management tools will be rolled out by 2021.

- Inform active ownership

Describe

As a committed asset manager, OFI AM engages with companies on climate change issues. OFI AM has included climate issues in its voting policy and votes in accordance supporting resolutions on climate change. The engagement is conducted by the OFI AM ESG team also in charge of the voting policy.

OFI AM is an active member of the IIGCC initiative and participate in the Climate 100+ collective action. It supports collective shareholder proposals targeting the most carbon intensive corporations.

- Other

**SG 13.5
CC**

Indicate who uses this analysis.

- Board members, trustees, C-level roles, Investment Committee
- Portfolio managers
- Dedicated responsible investment staff
- External managers
- Investment consultants/actuaries

SG 14	Mandatory to Report Voluntary to Disclose	Public	Additional Assessed	PRI 1
-------	---	--------	---------------------	-------

SG 14.1

Some investment risks and opportunities arise as a result of long term trends. Indicate which of the following are considered.

- Changing demographics
- Climate change
- Resource scarcity
- Technological developments
- Other, specify(1)
- Other, specify(2)
- None of the above

SG 14.2

Indicate which of the following activities you have undertaken to respond to climate change risk and opportunity

- Established a climate change sensitive or climate change integrated asset allocation strategy
- Targeted low carbon or climate resilient investments
- Phase out your investments in your fossil fuel holdings
- Reduced portfolio exposure to emissions intensive or fossil fuel holdings
- Used emissions data or analysis to inform investment decision making
- Sought climate change integration by companies
- Sought climate supportive policy from governments
- Other, specify
- None of the above

SG 14.3

Indicate which of the following tools the organisation uses to manage climate-related risks and opportunities.

- Scenario analysis
- Disclosures on emissions risks to clients/trustees/management/beneficiaries
- Climate-related targets
- Encouraging internal and/or external portfolio managers to monitor emissions risks
- Emissions-risk monitoring and reporting are formalised into contracts when appointing managers
- Weighted average carbon intensity
- Carbon footprint (scope 1 and 2)
- Portfolio carbon footprint
- Total carbon emissions
- Carbon intensity
- Exposure to carbon-related assets
- Other emissions metrics
- Other, specify
- None of the above

SG 14 CC**Voluntary****Public****General****SG 14.6
CC**

Provide further details on the key metric(s) used to assess climate-related risks and opportunities.

Metric Type	Coverage	Purpose	Metric Unit	Metric Methodology
Carbon footprint (scope 1 and 2)	<input type="checkbox"/> All assets <input checked="" type="checkbox"/> Majority of assets <input type="checkbox"/> Minority of assets	Reporting	TCO2/M€	Weight in portfolio * Total carbon emissions / Total liabilities
Portfolio carbon footprint	<input type="checkbox"/> All assets <input checked="" type="checkbox"/> Majority of assets <input type="checkbox"/> Minority of assets	Reporting	TCO2	The absolute greenhouse gas emissions (scope 1 and 2) associated with a portfolio
Carbon intensity	<input type="checkbox"/> All assets <input checked="" type="checkbox"/> Majority of assets <input type="checkbox"/> Minority of assets	Reporting and portfolio management	TCO2/M€	For corporate issuers, weighted average of volume of carbon emission per million dollars of revenue For govies, energy consumption from oil / GDP and GHG emissions / GDP
Exposure to carbon-related assets	<input type="checkbox"/> All assets <input checked="" type="checkbox"/> Majority of assets <input type="checkbox"/> Minority of assets	Portfolio management	The amount or percentage of carbon-related assets in the portfolio, expressed in \$M or as a percentage of the current portfolio value	

**SG 14.8
CC**

Indicate whether climate-related risks are integrated into overall risk management and explain the risk management processes used for identifying, assessing and managing climate-related risks.

- ⊙ Processes for climate-related risks are integrated into overall risk management

Please describe

OFI AM has tools and a coal policy that follows the information process via the risk committee and that impede any investment in coal-related securities.

Moreover, OFI AM has contracted with a service provider that we are integrating into the overall risk monitoring.

So, it uses 3 methodologies :

- the first one, developed by OFI AM, focused on the high stake sector's assets ;
- and two alternative methodologies developed by external entities ;
- its ESG analysis team is currently using a matrix approach (carbon intensity axis, energy transition axis) to identify issuers at risk or opportunity in the portfolios for which this is relevant.

Other more prospective approaches have been analyzed, including financial impact of climate-related risks and opportunities, and we will gradually include it in our risk monitoring systems.

In addition, a senior ESG analyst joined the OFI AM Risk Department in mid-2018 to participate in the integration of climate and ESG risks into the overall risk identification and monitoring process for investment portfolios.

Regarding the decision-making process, the Macif group makes strategic decisions related to climate risks and opportunities (exclusion of issuers from the investment universe for example) based on input from OFI AM (ESG Analysis and Risk Management Teams).

- Processes for climate-related risks are not integrated into overall risk management

SG 14.9 CC Indicate whether your organisation, and/or external investment manager or service providers acting on your behalf, undertake active ownership activities to encourage TCFD adoption.

- ⊙ Yes

Please describe

We engage with investee companies on climate change issues.

- No, we do not undertake active ownership activities.
- No, we do not undertake active ownership activities to encourage TCFD adoption.
